1 GENERAL ADVICE

- 1.1 PLEASE READ BEFORE USING THIS MANUAL
 - This manual is part of the product and should be kept near the instrument for easy and quick reference.
 - The instrument shall not be used for purposes different from those described hereunder. It cannot be used as a safety device.
 - Check the application limits before proceeding.
- 1.2 SAFETY PRECAUTIONS
 - Check the supply voltage is correct before connecting the instrument.
 - Do not expose to water or moisture: use the controller only within the operating limits avoiding sudden temperature changes with high atmospheric humidity to prevent formation of condensation
 - Warning: disconnect all electrical connections before any kind of maintenance.
 - The instrument must not be opened.
 - In case of failure or faulty operation send the instrument back to the distributor or to "Dixell s.r.l." (see address) with a detailed description of the fault.
 - Consider the maximum current which can be applied to each relay (see Technical Data).
 - Ensure that the wires for probes, loads and the power supply are separated
 - and far enough from each other, without crossing or intertwining.
 - Fit the probe where it is not accessible by the end user.
 - In case of applications in industrial environments, the use of mains filters (our mod. FT1) in parallel with inductive loads could be useful.

1. Turn off the instrument supply
 2. Insert the hot key.
 3. Turn on the power supply.
 4. Immediately the parameters are downloaded.
- During the download the regulation is locked and the top display shows the “dOL” blinking label. At the end of the download will appear:
- “End” if the programming procedure is completely OK, after 30seconds the regulation starts automatically.
- “Err” if the programming procedure has found an error and the parameter have not been transferred. In this case turn off and then on the instrument supply to repeat the operation or remove the hot key, with power supply off, to restart the regulation.

10.2 UPLOAD: HOW TO PROGRAM A “HOT KEY” WITH THE PARAMETERS OF THE INSTRUMENT

1. Turn on the power supply.
 2. Insert the hot key.
 3. Enter the function Menu.
 4. Select the **UPL** function (on the bottom display).
 5. Push **SET** key and immediately the instrument starts transfer the parameters into the Hot key.
- During the upload the regulation is locked and the top display shows the “**UPL**” blinking label. At the end of the UPLOAD will appear:
- “End” if the programming procedure is completely OK, after 30seconds the regulation starts automatically.
- “Err” if the programming procedure has found an error and the parameter have not been transferred. Repeat the procedure.
- To exit the UPL function push the MENU key or wait the time-out (15 sec).

11 PROGRAMMING USING THE KEYBOARD

Through the instrument keyboard it is possible to enter the programming. In all the three accessible levels the user can show and modify both value and visibility of the parameters. To ensure an easy navigation through the different levels the common parameters have been named and grouped under a family name.

The three levels of programming:

- Pr1 User level
- Pr2 Maintenance level
- Pr3 OEM level

11.1 PASSWORD DEFAULT VALUES

- Password level Pr1 = 1
- Password level Pr2 = 2
- Password level Pr3 = 3

Under the function Menu (to reset the Alarm Log or the Compressor Overload) the password is 0 (see parameter AL46)

Each password can be changed, the range is from 0 to 999.

Each parameter has two level: visibility and modify. Therefore it can be configured as follow:

- The parameter can be showed and changed.
- The parameter can be showed but not changed.

11.2 ENTER THE PR1 - PR2 - PR3 PROGRAMMING LEVELS

Pr1 LEVEL:

Push **SET + DOWN** together for 3 seconds, the top display shows the PAS label and the bottom display shows the Pr1 label. The leds cir1/cir2 are blinking (up and down leds) to inform that you now are in PR1 programming level.

Pr2 LEVEL:

From the Pr1 level push the UP key for 2 seconds and the bottom display will show Pr2. The top display still shows PAS.

Pr3 LEVEL:

From the Pr2 level push the UP key for 2 seconds and the bottom display will show Pr3. The top display still shows PAS. After selecting the level push the SET key and the top display will show the 0 blinking value where to insert the password . Set the password level using the UP and DOWN keys then confirm with SET key.

Depending on the password value there will be the different level access, if the password is wrong the instrument shows the password value again.

ATTENTION:

For all the programming levels Pr1,2,3: the CF family (or configuration parameters) can not be changed if the unit is running in chiller, heat pump. The user can check the leds #1 and #2 and if they are blinking it is not possible to change this parameters but it is necessary to set the unit in stand-by and then enter the programming again.

11.11 PROGRAMMING: DIGITAL INPUT AND OUTPUT POLARITY

The parameters that allow to configure different options such as:

1. Digital inputs
 2. Digital outputs (relay)
 3. Proportional output configured as ON/OFF
 4. Analogue input configured as digital input
- have a different parameter description that allows to configure the operating mode and the corresponding polarity.

Example of programming:

The bottom display shows the parameter label (CF36) Digital input ID1 configuration;

Note that the top display shows "c" or "o" before the configuration number.

The selection 7 for the digital input ID1 (CF36) means that it is the "high pressure switch of circuit 1".

The label "o" means that the digital input is active for open contact.

Otherwise if the selection is 7 for the digital input ID1 (CF36) = "high pressure switch of circuit 1".

The label "c" means that the digital input is active for closed contact.

11.12 CHANGE THE POLARITY OF THE DIGITAL INPUTS-OUTPUTS

Enter the programming:

1. Select a parameter with digital input/output value, The top display shows the label o before the configuration number while the bottom display shows the parameter label.
2. Push SET key: the o label and the configuration number are blinking, use the UP or DOWN key and select the proper polarity (o / c) of the function, then push SET key to confirm it all.
3. The top display blinks for some seconds and then it will shows the next parameter.

4. To exit the programming push **SET + UP** together or wait the timeout (15seconds).

12 DISPLAY LAYOUT

As default, In normal condition, the display shows the circuit 1 information.

The displayed circuit is indicated from the corresponding led **Cir1** on (UP key), or **Cir2** (circuit 2, DOWN key).

12.1 HOW TO SHOW THE MEASUREMENT LIST.

With the led **Cir1** on, push UP or Down keys to display the labels of the information of the circuit 1.

With the led **Cir2** on, push UP or Down keys to display the labels of the information of the circuit 2.

Each measurement is defined by a label that indicates which if it is a pressure a temperature or a time.

12.2 SHOW THE CIRCUIT 1 OR 2

To swap between the information of the two circuits use the UP and DOWN key to select a label then push SET, check the led.

Example in fig.1

Led cir1 is on: the top display shows the value of the output evaporator temperature (7.8°C) of the circuit 1, The bottom display shows Out 1. Push SET key to swap to the circuit 2. **Fig2**

Led cir2 is on: the top display shows the value of the output evaporator temperature (7.9°C) of the circuit 2, the bottom display shows Out 2.

The remote terminals are for panel mounting, panel cut-out 72x56 mm, and screwed with two screws.
The IP65 can be reached with the gasket RGW-V (optional).

WALL MOUNTING: use the vertical V-KIT (black, white and grey) as described in the following scheme:

19 ELECTRICAL CONNECTIONS

The instrument is provided with:

- 3 removable terminal blocks MOLEX with 0.5 mm² wires:
16 / 8 /22 ways for digital / analogue inputs and modulating outputs.
- 4 removable screw terminal block STELVIO for 2.5 mm² wires connection: 3 / 4 / 5 / 6 ways for the relay outputs.
- 5 ways connector for TTL RS485 interface outputs.
- 2 ways connector for remote panels to be connected with the cable **CAB/CJ30**. The remote panels have two terminals for 2.5 mm² wires.
- The **LW30 KIT** is the complete kit with MOLEX + 3 mt wires already connected and the STELVIO terminals.
- Check the connections and the line voltage before turning on the power supply.
- Keep low voltage cables, such as analogue/digital inputs/outputs and probes, away from power cables and terminals.
- Respect the maximum load current of each relay output, in case of power loads use filtered contactors.
